

Internship at VSL

Looking for an interesting internship or graduation assignment? Something that prepares you for the real world? In short: an internship that works for you

During your internship at VSL you'll cooperate with our team on real projects, which comes with it's own responsibilities. To get the most out of your internship, we will adjust based on your interests and capabilities.

Therefore an internship at VSL is the opportunity to test yourself in an all-round and professional environment. Our internships, which can last for a period from 13 weeks up to 12 months, are not only paid, but also offer you a chance to prove yourself with challenges in your respective field.

Within VSL we have a multitude of different internships, depending on your field of study. These include Applied Physics, Mechanical Engineering, Electronic Engineering, Chemistry, Physics, Applied Mathematics, Computer Science and Technical Sales Engineer.

Graduation assignments

During your internship or graduation assignment, we will assign you an experienced mentor to help you on your way while you work on projects. For you to get a good representation of what it's like to work in your chosen field we will treat you as an employee. As an intern you will also profit from regular and structured evaluation of your presentation by your mentor and direct supervisor. You'll also receive feedback directly to help you reinforce your strong suits and further develop your interests.

Additionally we will offer you the opportunity to fulfill your graduation assignment with us. And if your internship or graduation period meets our expectations we might even offer you a job after you've graduated.

Internships and graduation assignments are offered in Delft. We also offer an internship fee.

The duration of your internship can be discussed with our HR manager.
